Lab 7.02 - Pet Class

In this lab, we will create a Pet class that will keep track of the type of animal, color, food, noise and name of a given animal.

Create a class called Pet that has the following attributes

- Animal (i.e. dog, cat, fish)
- Color (i.e. spotted, black, tabby, white)
- Food (i.e. kibbles, tuna, fish flakes)
- Noise (i.e. meow, woof, bark)
- Name (i.e. Sparky, Scooby Doo)

Specifications

1. Make sure to use the `__init__` method to create these attributes.
2. Create a list of pets.
3. Create a function that takes in a list of pets and prints out the name and the food attributes.
4. Test your function with your list of pets.
